

Working towards NIS2 compliance with Secutec Services

The new NIS2 (Network & Information Systems) regulatory framework casts a much wider net than its predecessor. The category of essential industries has been expanded and an extra category was added, encompassing organizations in 'important' sectors.

Secutec services can play an important role for your organization towards compliancy.

What is NIS2 and who is included?

The NIS2 framework evens the **cybersecurity playing field across the European Union**. Organizations will be held to the same standards, including requirements, supervision and fines. Medium and large enterprises that are active in one of fifteen essential industries will have to be compliant regarding their cybersecurity measures, implementations and protocols.

NIS2 has been in effect since **October 18th 2024**. All organizations, including businesses within your supply chain, will be expected to be **registered with the CCB by March 2025** and **fully compliant by April 2026**. The largest organizations will face an audit before April 2027.

Main domains for compliancy

Management

Every member of management needs to have a firm grasp on their organization's efforts concerning NIS2 requirements. They will be held responsible for calculating and dealing with cybersecurity risks.

Reporting to the Government

Organizations have to put processes in place to ensure correct reporting to local authorities. One requirement stipulates the notification of every cyber incident within the first 24 hours.

Risk Management

Measures need to be implemented to ensure the minimization of risks and consequences of cyber incidents. This encompasses incident response, supply chain security, network security, access control and encryption.

Business Continuity

Organizations need to be able to guarantee operational continuity in case of a cyber incident. Including, but not limited to, systems recovery, emergency procedures and operating an incident response team.

Secutec and the NIS2 framework

The infographic below visualizes how and where Secutec can make a significant contribution towards your organization's NIS2 compliancy.

For more info on the NIS2 regulation, please visit the CCB website or contact your national cybersecurity authority.

About Secutec

Established in 2005, Secutec is considered an authority in the field of cybersecurity, cyber threat intelligence and cyber incident response. Based on our 'best of breed' product portfolio, own developed innovations, and in-house services, our IT Security Experts advise and guide you to optimize your cybersecurity posture and leverage your IT investments to their full potential.

Headquartered in Aartselaar, the organization has a team of 85 in-house experts and serves more than 800 customers across 60 countries. Secutec also

has offices in the Netherlands, Austria, Canada and representation in the ANZ region (Australia & New Zealand).

Secutec provides partial solutions towards NIS2 compliance. We disclaim responsibility for achieving full compliance and cannot be held liable in the event of any cyber incidents that may occur. Clients are advised to implement comprehensive strategies and seek additional measures to ensure full compliance with NIS2 requirements.
