

Secutec SecureRESPONSE

Incident Response

Prevent now, secure tomorrow

24/7 Emergency Response to Hackers

Secutec's SecureRESPONSE Team, our own dedicated Cybersecurity Incident Response Team or CSIRT, supports organizations to efficiently respond to cybersecurity incidents in order to minimize the damage caused by attackers. It provides a framework by which we determine the scope and risk of the incident, contain the threat, respond appropriately and quickly to that incident, communicate about the results and risks to all stakeholders, and reduce the likelihood of an incident from reoccurring.

Our team is available **24/7** and takes the lead in providing guidance to both your own IT team and eventual IT partners throughout the duration of the project. Collaborating with the company's management, we will **define various scenarios for restoring the operational status of your digital environment**, taking into consideration security risks and financial impact. Ultimately, you can make the decision on the scenario that best aligns with your needs.

We have a broad experience in handling different types of security breaches and have managed **ransomware negotiations for highly essential institutions** in various countries around the world.

Verhoog uw zekerheid met SecureCARE

Nog steeds zijn te weinig bedrijven goed voorbereid op cyberincidenten en -aanvallen. **Het resultaat?** Aanzienlijke economische schade, reputatieverlies, het lekken van waardevolle gegevens, het stilvallen van activiteiten of in het ergste geval het einde van uw bedrijf.

Door u te abonneren op SecureCARE, onze SecureRESPONSE SLA, krijgt u toegang tot een van de meest onschatbare voorzieningen ter wereld: **gemoedsrust**. Met deze Service Level Agreement activeert ons toegewijde Incident Response Team de incident response service binnen **4 uur** na uw eerste telefoontje.

Incident Response Lifecycle

The Incident Response Lifecycle approach guarantees a **structured methodology** to handle security breaches and outline key stages towards a swift and comprehensive response and recovery.

FORENSIC ANALYSIS & INVESTIGATION | LEVERAGE THE POWER OF THREAT INTELLIGENCE

The SecureRESPONSE Team immediately acts promptly to **contain the threat** and **limit the spread** to prevent further damage and clean the threat from the environment. In this stage, we also **investigate the root cause** of the attack, how it entered your systems and how far - internally and potentially externally - it has spread.

Throughout the investigation and analysis phase, we combine **threat intelligence technology** such as XDR and forensic tools with our own Secutec SecureDNS defensive measures. Using the information about threat actors, attack patterns and techniques, we **assess the severity of the threat and its potential impact** on the organization and make an **initial proposal for the recovery and rebuild options**.

RECOVERY | "TO PAY OR NOT TO PAY"

Based on the outcome of the analysis and the identified recovery options, we play an advisory role in the important decision whether to pay or not to pay to unlock the encrypted data. If this decision is made, or to keep all options open, our team will take the lead in contacting the hacker and **start negotiations** after approval of the CEO.

INTERNAL & EXTERNAL COMMUNICATION | RESTORE THE TRUST

Intelligent communication is the key to restoring confidence, both towards employees and external stakeholders. Secutec supports you by documenting every action and issuing a **complete and comprehensive report of the incident** to your company's CEO. We assist your in-house IT team or external partner with all internal communication. Additionally, we assist in **reporting to the relevant authorities**.

Rebuild a safe environment

Our SecureRESPONSE Team collaborates seamlessly with your designated IT department or preferred IT partner to implement robust security tools and processes aimed at preventing any further damage to your digital infrastructure.

- **Security Policies:**

We actively engage with your team to develop and enforce needed security policies aimed to enhance the overall security posture of your digital environment.

- **Advisory Services:**

Based on our extensive knowledge and experience, our team offers tailored recommendations and strategic insights to maximize the effectiveness of your protective measures.

E-book

Prevention is better than the cure

How can we **minimize the risk of a cyber attack** on your organization? Let's get together to explore the most suitable measures. Could it be enhancing staff awareness through training? Perhaps a comprehensive security audit is in order, or maybe continuous monitoring is the key? If you're keen on reducing stress and costs, reach out to us, and we can discuss the tailored solutions we can offer for your organization.
