

Attack Surface Management

Secutec SecureSIGHT

Prevent now, secure tomorrow

Look at your business like a hacker and prevent cyber incidents

With **Attack Surface Management (ASM)**, our cyber experts from the Secutec Security Operations Centre (SOC) go in search of all possible 'open doors' through which hackers can penetrate your organization. During this thorough **discovery process, all internet-facing assets are identified, both the devices and the applications running on them.**

Just as a hacker gathers all available information about potential vulnerabilities within your perimeter during his initial reconnaissance, ASM provides you

with the same data so that you can intervene before they are exploited. Our **holistic approach**, with ASM complementing traditional vulnerability scanning, goes beyond just identifying known vulnerabilities. ASM also reveals unknown vulnerabilities, such as externally hosted websites or host changes, that may have escaped your attention. This gives us a **better understanding of hackers' initial point of access**, allowing us to take a proactive approach to stop potential attacks as early as possible and limit damage.

Clear priorities with Secutec ASM

Everything starts with sending a contact request to an IP address, after which Secutec performs an analysis on the response. Which operating system is present? Is it an FTP or mail server? Which SQL databases, server software, or version of Wordpress is present?

Found references are checked against multiple cybersecurity sources. Secutec then adds value to this information by **prioritizing vulnerabilities** for users, from vulnerabilities that are being actively exploited to issues that belong on your to-do list but are not immediately urgent.

Managed ASM

Secutec offers ASM as a **managed service** within SecureSIGHT. This offers some indispensable advantages:

- 1 Secutec defines priority problems to tackle
- 2 No one-time snapshot but continuous analysis and support
- 3 Immediate alerts in the event of high-risk vulnerabilities
- 4 Weekly technical report with vulnerabilities found
- 5 Full visibility on all internet-facing assets

In addition, you will receive a monthly *executive* report outlining the evolution of your organization's security posture. This will make trending data immediately clear to the IT Manager/CISO, his colleagues and management.

Continuously patrolling your digital perimeter

Secutec SecureSIGHT's **managed service** offers the most cost-efficient solution that covers the most crucial aspects of a cyber attack's life cycle by analyzing a wide range of attack vectors and indicators of compromise. The **Secutec Security Operations Center (SOC)** collects all data about possible attacks, adds context to alerts and provides you with actionable data and interpreted insights.

Leveraging your current security infrastructure, Secutec SecureSIGHT presents **11 different modules** tailored to your specific requirements.

MySecutec | Take control of your cybersecurity

The MySecutec portal allows you to be more engaged with the security results of your organization. It offers a **clean, intuitive dashboard** that brings together **all essential security data in one place** such as assets, reports, threats, and accepted risks.

With actionable insights, you can quickly identify, prioritize and address the most critical vulnerabilities, track asset risk levels, and follow up on threats with built-in notes, filters, and export options. Real-time alerts for critical threats are delivered via email, ensuring you're always informed and able to act immediately.

Your central security hub, always at hand

The MySecutec App gives you **real-time access** to your cybersecurity posture - wherever you are.

With the app you can:

- Instantly access your cybersecurity data
- receive real-time alerts for critical vulnerabilities
- track your security score, threats, and risks live
- effortlessly monitor and manage credential breaches
