

Leaked Credentials Monitoring

Secutec SecureSIGHT

Prevent now, secure tomorrow

Empowering your defenses with leaked credentials intelligence

Leaked credentials is the name that covers any **unauthorized disclosure of personal or organizational login details**, including usernames, passwords, and personal identifiable data (PID). They relate to various types of accounts, such as email, social media, banking, or corporate networks and are caused by external database breaches, **password stealers** that have not been picked up by traditional anti-virus systems, phishing, hacks, or user negligence.

Why leaked credentials pose a significant threat

In 2023, over 60 percent of all data breaches were malware-related and included 343.78 million stolen credentials ¹. **Leaked credentials serve as the primary gateway for cybercriminals into corporate networks.** With these legitimate passwords, unauthorized access becomes a significant risk, presenting a key to bypass security measures and potentially compromising personal, financial, or organizational data.

How SecureSIGHT mitigates the risk

As cyber threats grow in sophistication, relying solely on traditional security protocols has become insufficient. While standard safety measures and Multi-Factor Authentication (MFA) are crucial initial steps, organizations are still vulnerable to uncontrollable factors such as weak passwords and negligent employee behavior. Secutec SecureSIGHT's Leaked Credentials Monitoring module offers a **proactive layer to your security infrastructure**, providing visibility into compromised usernames and passwords, **empowering your company to intervene at an early stage** and **avoid additional damage** to your corporate environment.

Darknet Search

We scour the darknet for valid leaked credentials associated with your business and its users.

No IT Infrastructure Changes

Our hosted infrastructure seamlessly integrates with your existing setup.

Instant Alerts

Receive interpreted alerts and insights in real-time.

Monthly Reporting

Benefit from regular (executive-level) reports.

Credential Identification

We categorize credentials, distinguishing between employee, customer, third party, and external website logins.

Support

We can advise on the best next steps to take to resolve the breach.

Infected Host Identification

We provide information to help you identify the host on which malware was installed.

Managed Service or One-Shot Report

Focus on core tasks while we handle the monitoring.

Curious to witness the effectiveness of our solution?

Contact us for a one-shot monitoring report and a demonstration of all dashboards and functionalities.

¹ SpyCloud 2024 Annual Identity Exposure Report

Continuously patrolling your digital perimeter

Secutec SecureSIGHT's **managed service** offers the most cost-efficient solution that covers the most crucial aspects of a cyber attack's life cycle by analyzing a wide range of attack vectors and indicators of compromise. The **Secutec Security Operations Center (SOC)** collects all data about possible attacks, adds context to alerts and provides you with actionable data and interpreted insights.

Leveraging your current security infrastructure, Secutec SecureSIGHT presents **11 different modules** tailored to your specific requirements.

MySecutec | Take control of your cybersecurity

The MySecutec portal allows you to be more engaged with the security results of your organization. It offers a **clean, intuitive dashboard** that brings together **all essential security data in one place** such as assets, reports, threats, and accepted risks.

With actionable insights, you can quickly identify, prioritize and address the most critical vulnerabilities, track asset risk levels, and follow up on threats with built-in notes, filters, and export options. Real-time alerts for critical threats are delivered via email, ensuring you're always informed and able to act immediately.

Your central security hub, always at hand

The MySecutec App gives you **real-time access** to your cybersecurity posture - wherever you are.

With the app you can:

- Instantly access your cybersecurity data
- receive real-time alerts for critical vulnerabilities
- track your security score, threats, and risks live
- effortlessly monitor and manage credential breaches
