

Managed XDR Services

Secutec SecureSIGHT

Prevent now, secure tomorrow

Avoid the impact of cyber attacks with Managed XDR

While a traditional anti-malware solution is limited in its ability to catch all types of modern threats, Endpoint Detection & Response (EDR) no longer just focuses on suspicious files but also looks at suspicious behaviour on all endpoints within your organisation.

Extended Detection & Response (XDR) is an evolution of EDR and provides even more comprehensive, real-time visibility on cyber threats by **integrating with various sources** such as Secutec SecureDNS, firewall logs and O365 logs, among others. By aggregating all this additional data, XDR delivers enhanced visibility, detection and response to threats.

This way, XDR enables the creation of a Security Operations Centre (SOC) on every endpoint, so to speak.

How can Managed XDR protect you?

By offering XDR as a **managed service** within Secutec SecureSIGHT, you enjoy complete peace of mind. Our technology protects you day and night and secures your systems in real-time. Our analysts analyse your data and interpret alerts, notifying you of acute threats that require us to review the necessary follow-up actions together.

Secutec advises you on the implementation according to your specific needs and maintains the configuration for you, allowing you to concentrate on addressing your internal IT challenges while we secure your digital boundaries.

Integration with Secutec SecureDNS

Secutec SecureDNS works on the basis of **the world's most comprehensive malware database**. This Secutec Integrated Advanced Malware Database (SIAM) combines the knowledge and expertise of leading cybersecurity providers. By checking outgoing DNS requests against SIAM, malicious domains are automatically blocked, giving viruses, ransomware and phishing attacks no chance to trigger dangerous payloads.

The integration of SentinelOne XDR with Secutec SecureDNS provides a **bi-directional enrichment** of both platforms and thus an even deeper and more efficient protection. Injecting your XDR solution with SecureDNS data enables even faster detection and response to new threats and cyber attacks. On the other hand, SecureDNS blocks are enriched with XDR data, making more information available about certain blocked queries, such as the user and process. This helps you to investigate the cause and context of blocked DNS queries.

Continuously patrolling your digital perimeter

Secutec SecureSIGHT's **managed service** offers the most cost-efficient solution that covers the most crucial aspects of a cyber attack's life cycle by analyzing a wide range of attack vectors and indicators of compromise. The **Secutec Security Operations Center (SOC)** collects all data about possible attacks, adds context to alerts and provides you with actionable data and interpreted insights.

Leveraging your current security infrastructure, Secutec SecureSIGHT presents **11 different modules** tailored to your specific requirements.

MySecutec | Take control of your cybersecurity

The MySecutec portal allows you to be more engaged with the security results of your organization. It offers a **clean, intuitive dashboard** that brings together **all essential security data in one place** such as assets, reports, threats, and accepted risks.

With actionable insights, you can quickly identify, prioritize and address the most critical vulnerabilities, track asset risk levels, and follow up on threats with built-in notes, filters, and export options. Real-time alerts for critical threats are delivered via email, ensuring you're always informed and able to act immediately.

Your central security hub, always at hand

The MySecutec App gives you **real-time access** to your cybersecurity posture - wherever you are.

With the app you can:

- Instantly access your cybersecurity data
- receive real-time alerts for critical vulnerabilities
- track your security score, threats, and risks live
- effortlessly monitor and manage credential breaches
